In addition to studying a wide range of classic and contemporary typefaces, the book presents a large number of students' work, sketches and definitive design. The book is structured in three parts that explore the bi-dimensional design, the bi-dimensional form and the three-dimensional design and that examine from the systematic typification of forms and figures to the thorough compendium of compositional resources, such as Overcoming, dyslocation, gradation or anomaly, to name some examples. In the difference of spoken or written language, whose grammatical laws have been established for centuries, the settlement of conventional regulations on visual language is a task that the technical design did not undertake until the second half of the twentieth century . It also included about 900 diagrams and computers and a specialized basic glossary.
